

# Histology Report

This report concerns Mr. Daniel K. Williams (born 1978-06-12, record number 884512), who underwent resection on 2025-10-04 for further evaluation of a colonic lesion.

## Microscopic Description:

Sections examined from the submitted Colon resection specimen reveal an infiltrating epithelial neoplasm forming irregular glandular structures. The tumor shows moderate nuclear atypia and evidence of invasion through the muscularis propria into the pericolic adipose tissue. No definite vascular or perineural invasion is seen. The surrounding mucosa demonstrates features of chronic inflammation.

## Diagnosis:

Adenocarcinoma of the colon, moderately differentiated

## Pathologic Staging:

TNM classification: pT3, pN0, M0

In summary, the findings are consistent with an invasive colonic adenocarcinoma, moderately differentiated, without nodal or distant metastasis identified in the examined material.
