

Department of Internal Medicine and Oncology

Discharge Summary

Patient: Noah J. Thompson (DOB 1969-01-30, MRN 451237)

Date of Discharge: 2025-09-28

Clinical Course

The patient was admitted for evaluation and treatment of a colonic mass detected on screening colonoscopy. He has a background of type 2 diabetes mellitus with suboptimal control. Imaging studies (Colonoscopy and CT abdomen/pelvis (sigmoid colon mass)) confirmed the presence of a tumor in the sigmoid colon. Surgical resection was performed. Pathology confirmed adenocarcinoma, TNM stage II (pT3, pN0, M0), with no nodal or metastatic spread. The hospital stay was uncomplicated, and post-operative recovery was stable.

Laboratory Results

Test	Result
HbA1c	8.2 %
Fasting Glucose	168 mg/dL
Creatinine	1.0 mg/dL
eGFR	82 mL/min/1.73m ²
Total Cholesterol	210 mg/dL

Medications at Discharge

- Metformin 1000 mg BID
- Atorvastatin 20 mg QD
- Enalapril 10 mg QD

Follow-Up

The patient should attend oncology clinic within 3 weeks to discuss adjuvant therapy considerations. A follow-up with the endocrinology outpatient clinic is scheduled to optimize diabetes management. Routine surveillance colonoscopy is advised in one year. Patient education regarding diet, glucose monitoring, and lifestyle modification was reinforced.
