

Discharge Summary

Mr. Rolf Schneider, DOB 08/15/1952, was admitted on 11/18/2024 with increasing abdominal distension and confusion. He has known alcohol-related cirrhosis (Child-Pugh B8) followed by hepatology for 4 years.

Primary Diagnosis: Liver cirrhosis (K74.6)

HbA1c	7.2%
Bilirubin	4.8 mg/dL
INR	1.9
Albumin	2.6 g/dL

HbA1c of 7.2% found — hepatogenous diabetes confirmed by oral glucose tolerance test.

Abdominal paracentesis removed 5.4 L of culture-negative ascites. IV albumin given. Lactulose titrated and rifaximin 550 mg twice daily started for hepatic encephalopathy.

Brief alcohol intervention given; addiction medicine referral arranged. Social work assessment initiated.

Discharged 11/25/2024 in improved condition. Hepatology in 3 weeks.
