

Discharge Summary

Patient:	Franz-Josef Kremer
Date of Birth:	04/14/1951
Admission Date:	06/09/2025
Discharge Date:	06/18/2025
Attending Physician:	Prof. Heinz Schmitt, MD

Mr. Franz-Josef Kremer, DOB 04/14/1951, was admitted on 06/09/2025 to initiate ibrutinib for relapsed CLL. Initially diagnosed 2019; first-line FCR in 2022; relapsed 18 months later with bulky lymphadenopathy.

Primary Diagnosis: Chronic lymphocytic leukemia (C91.1) — Tumor staging: T3 N2 M0

HbA1c	6.5%
Lymphocytes	68.4 G/L
Hemoglobin	10.2 g/dL

Mr. Kremer has well-controlled type 2 diabetes on metformin (HbA1c 6.5%). Permanent atrial fibrillation on apixaban 5 mg twice daily — bleeding risk with ibrutinib discussed in detail. Mild hypertension on ramipril 5 mg.

Ibrutinib 420 mg once daily initiated. Apixaban continued with counseling on bleeding risk. BP monitoring started. Minor diarrhea day 3 resolved spontaneously.

Medication at discharge: Ibrutinib 420 mg, metformin, apixaban, ramipril, omeprazole. Follow-up: Hematology in 4 weeks.
