

Discharge Summary

Patient:	Manfred Koch
Date of Birth:	09/04/1964
Admission Date:	01/27/2025
Discharge Date:	02/03/2025
Attending Physician:	Dr. Luise Hartmann, MD

Mr. Manfred Koch, DOB 09/04/1964, was admitted on 01/27/2025 for initiation of basal insulin. Diagnosed with type 2 diabetes in 2019, on triple oral therapy (metformin, dapagliflozin, sitagliptin) with progressive glycemic decline. Endocrinologist recommended inpatient insulin initiation given very high HbA1c.

Primary Diagnosis: Type 2 diabetes mellitus (E11.9)

Lab values:

Parameter	Value	Reference
HbA1c	8.7%	< 7.0%
Fasting glucose (admission)	198 mg/dL	70–100 mg/dL
Fasting glucose (discharge)	112 mg/dL	70–100 mg/dL
Creatinine	1.2 mg/dL	0.7–1.2 mg/dL

Mr. Koch has hypertension on ramipril 10 mg and bisoprolol 5 mg. Mild hypercholesterolemia on atorvastatin 20 mg. BMI 31.8. Non-smoker. Bank manager. Significant anxiety about insulin — addressed with intensive education.

Insulin degludec 10 units initiated, titrated to 14 units by day 5. Dapagliflozin discontinued (DKA risk). Sitagliptin continued.

Medication at discharge: Metformin, insulin degludec 14 units, sitagliptin, ramipril, bisoprolol, atorvastatin.

Follow-up: Diabetology in 4 weeks. Telephone review in 2 weeks.
